

1. Admin Roles and Permissions

Different types of admins help maintain **control**, **security**, and **specialization**. You don't want everyone doing everything.

| Role | What they can do | Who fits this role |
|---------------------------------|---|---|
| Super Admin | Add/remove admins, manage access roles, view logs, delete content (only for safety) | You (Joyce), or a trusted developer/admin |
| Counselor Admin | View reports, respond to victims (only when victim gives permission), tag cases | Trained trauma counselor, NGO staff |
| NGO Analyst | View anonymous reports and charts, download PDF data (no contact info) | NGO coordinators, program officers |
| Read-Only Admin | View reports only — cannot respond or download | Church reps, volunteers in training |
| Community Access Partner | Help enter reports for users without phones (form filler only) | Nurse, market leader, trained youth |
| Auditor (Optional) | View logs, admin actions, and changes (read-only) | Internal ethics team or sponsor auditor |

Each admin is assigned a role during registration or from a dashboard setting (using Django's Group & Permissions system).
