

This is **how NGOs, churches, and counties** can turn this platform into long-term help — **without breaking privacy.**

What To Track:

Metric	Example Use
Total reports per month	Shows volume trends over time
Abuse type frequency	e.g., Emotional Abuse is most common
County or sub-county heatmap	Identifies which regions need outreach
Age group of victims	Helps tailor messaging and help resources
Voice vs Text usage	See how many use the voice option — sign of literacy issues
% reports requesting help	Shows how many are ready for follow-up support

Use Django with chart libraries like `Chart.js`, `Plotly`, or export to CSV.

Example chart on admin dashboard:

 *"In March, 28 women from Kisumu reported abuse — 14 of them asked for help."*

☒ Bonus: Audit Trail Best Practices

- ☒ Show "last logged in at" on admin profiles
- ☒ Each report has a small footer: *"Viewed 3 times. Last by Grace on May 10."*
- ☒ Actions like deletion or follow-up **always prompt for confirmation**
- ☒ Regularly export logs for backup or review
